

Science

Our Vision:

Our vision for science is to give our children a high quality core curriculum which enables them to explore, engage, discover and make sense of the world around them; to provide the opportunity for hands on inquiry based experiences and investigations which in turn will facilitate and nurture a healthy curiosity and the confidence to question and investigate; as teachers, to lead by example, be enthusiastic and inspire children in our care to make meaningful links between classroom learning and the real word.

Our principles:

Science should make us:

Curious

Interested

Excited

Naturally questioning

Create awe and wonder

Enthusiastic
